

FLATLITE®

The world's widest, thinnest, longest lightbulb™

Installation Bulletin Connecting Multiple Lamps

There is no limit to the number of individual FLATLITE lamps that can be connected together on a single power supply.

Electrically, lamps are connected in a parallel arrangement as shown in the examples below. It is important to maintain a separation between each side of the lamp. All 'A' wires should be paired together and run to one Power Supply output lead and all 'B' wires to the other
